Think about tomorrow today
Stop R-404A and R-507

Honeywell plans to stop selling the high GWP HFCs R-404A and R-507 in Europe in 2018 as contracts permit to help the industry to adopt the F-gas regulation more quickly. Honeywell recommends Solstice® N40 (R-448A) and Genetron Performax® LT (R-407F) as the most economical and environmentally advanced substitutes.

How you benefit from switching to R-448A and R-407F

- **Timing**: You are ahead of regulatory deadlines.
- **Economical**: With lower energy consumption you can save money during the life-span of the installation.
- **Availability**: Both products are available today and can be used for new installations, retrofit and service without end date.
- **F-gas compliance/Kigali Amendment**: You will be more energy efficient and environmentally sustainable and will reduce greenhouse gas emissions.
- **Technical support**: Honeywell’s technical expertise will help you throughout the transition and makes it easy to switch.
Sustainability at Honeywell

Honeywell is building a smarter, safer, and more sustainable world. That’s the Power of Connected. That’s the Power of Honeywell.

>65% Reduction in our GHG emissions 2004–2015*

~40% Increase in our energy efficiency 2004–2015*
